Our national registries and real-world evidence have already improved treatment strategies, but challenges remain in integrating patient perspectives, harmonizing data, and ensuring real-time clinical implementation. By expanding pragmatic trials, utilizing AI-driven analytics, and strengthening cooperation, we can move beyond traditional outcome measures and focus on improving patients' quality of life. In this lecture I will explore how we can turn data into action and set new global standards for patient-centered, data-G. Gisslasson (DK)</p>
